NEW COURSE PROPOSAL

PROGRAM AREA	POLS
--------------	------

1.	Catalog Descr	ription of th	e Course. [Follow	, accepted catalog fo	ormat.]		
	Prefix POLS Course# 345 Title SCIENCE AND PUBLIC POLICY Units (3) 3 hours Lecture per week Prerequisites Corequisites Description POLS 345: Examines the relationship between science, politics, and public policy and prepares students to make informed decisions concerning the societal implications of many rapidly advancing avenues of scientific research. Same as BIOL 345. GenEd: D, Interdisciplinary BIOL 345: Examines the relationship between science, politics, and public policy and prepares students to make informed decisions concerning the societal implications of many rapidly advancing avenues of scientific research.						
	Same as POLS 34	G DIGE uired	Fraded ☐ CR/NC ☐ A - F ☐ Optional (Studenhoice)	Total Completion	 □ Repeatable for up to units Total Completions Allowed □ Multiple Enrollment in same semester 		
2.	Mode of Instruct Lecture Seminar	Units	Hours per Unit	Benchmark Enrollment 30	Graded Component	CS # (filled in by Dean)	
3.	Writing, and/or L Justification: Scient	anguage requi ence has beco	rements) [Use as much me a powerful transfe	h space as necessary] forming force in society	y, fostering innovation	nd whether it meets Universion and economic growth, a	

raising both expectations for quality of life and concerns about possible risks associated with new ideas and technologies. The impacts of science on our world are directly affected by public policy decisions about how research funds are allocated, priorities established, the research enterprise organized and regulated, knowledge communicated and applied, and accountability maintained. Policy decisions also influence the societal consequences of scientific research in diverse areas such as the economy, the environment, health, national security, and social structure. The challenge of using science to contribute to desirable outcomes rests upon our government's ability to implement appropriate science policies, which, in turn, requires a permanent dialogue between scientists, policy makers, and an informed electorate. The news media are full of policy debates that stem from scientific advances. Public interest, and more importantly, understanding, of the science behind these issues will help shape the course of future legislation from the local level to internationally. This interdisciplinary course, explores the relationship between science and public policy and prepares CSUCI undergraduates to make informed decisions concerning the societal implications of many rapidly advancing avenues of scientific research.

Learning Objectives:

Upon completion of this course students will be able to: (Press enter for the next bulleted item)

- Discuss news media depictions of scientific policy issues
- Discuss the science that underpins major issues of public policy covered in class
- Distinguish high quality scientific research from writing that is opinion or ideology driven
- Evaluate claims made by policy makers regarding the scientific merit of public policies
